## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1, 4-6, 8-20, 22-25, 27-37 and 41-49 are allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious an imaging system including: a parallel to serial converter electrically coupling a plurality of parallel outputs of a multi-element photodetector to a serial input of an ultrasound console, wherein the ultrasound console processes data provided by the interferometer to form an image for display, in combination with the rest of the limitations of claim 1.

As to claim 28, the prior art of record, taken alone or in combination, fails to disclose or render obvious an imaging system including: a multi-element photodetector having a plurality of parallel outputs; and a parallel to serial converter comprising a plurality of inputs, each input being coupled to a respective one of the plurality of outputs of the detector, to convert the parallel data output by the plurality of outputs of the detector into serial data, in combination with the rest of the limitations of claim 28.

As to claim 32, the prior art of record, taken alone or in combination, fails to disclose or render obvious an imaging system including: a multi-element photodetector having a plurality of parallel outputs; and a parallel to serial converter comprising a plurality of inputs, each input being coupled to a respective one of the plurality of outputs of the detector, to convert the parallel data output by the plurality of outputs of the detector into serial data, in combination with the rest of the limitations of claim 32.

As to claim 41, the prior art of record, taken alone or in combination, fails to disclose or render obvious an imaging system including: a multi-element photodetector having a plurality of parallel outputs; and a parallel to serial converter comprising a plurality of inputs, each input being coupled to a respective one of the plurality of outputs of the detector, to convert the parallel data output by the plurality of outputs of the detector into serial data, in combination with the rest of the limitations of claim 41.
